

K series eductor mixing nozzles

FUNCTIONS

- Effective, economical way to circulate liquids in closed or open tanks
- No moving parts
- Inherently clog resistant
- Requires minimal maintenance
- Available in both plastic and metal construction

MATERIAL CHARACTERISTIC

Constructed of carbon fiber -glass-reinforced Polypropylene or SS316 Maximum operation temperature 120°C, 300°C for stainless steel. Corrosion resistance and aging resistance.

DESIGN FEATURES

Provide a homogeneous fluid mix without the use of air agitation precluding oxidative decomposition of air agitation of the solutions. Improve circulation of the turbulent flow and optimized mixture of the solutions. Assures uniform mixture of solutions and improve product quality.

In large solution tank ,annular distribution of the mix fluid nozzle is more effective than mono-distribution, and horizontal arrangement is the lowest efficiency .

The mixing fluid nozzles should be installed at the bottom of the tank in order to get to a maxium circulation rate.

Below are some of the typical distribution of the eductor mixing nozzle.

Rectangle or square stirred tank

Stratification stirred tank

Spare parts rinse bath

Gird structured plating bath

DESIGN FEATURES

Use in liquid injection, inhalation, the surrounding liquid, leaves out the amount of liquid is supplied by 3-4 times.
 Simple structure, compact design.
 Standard pressure: 0.5bar.

COMMON APPLICATIONS

- Mixing: liquid mixing, preventing the precipitation, relieving the concentration difference.
- Cleaning: cleaning solution.
- Response: liquid etching, such as electroplating.
- Structure: resin or metal type.
- Material: SS303, PP (A part of injection molding products)
